

Hooking-Up: ANCHOR POINT

Wireless direct link to your Handibot

1

HANDIBOT CONCEPTS

There are 2 Types of Hooking-Up!

- Two ways you can **wirelessly** link your Handibot to your device -- smart-phone, tablet, PC, Mac (these methods make different use of Wi-Fi technology).

1. Anchor Point (AP) mode provides a **direct** wireless link.

- it's off-line, no network or router needed
- always available to you
- used in setting up a network connection
- IP address is defined (192.168.42.1)

2. Networked mode wirelessly links over your local **network**.

- lets your device access other resources
- allows internet access, FabMo updates
- IP address must be determined

2

HANDIBOT CONCEPTS

There are 2 Types of Hooking-Up!

1. Anchor Point (AP)

2. Networked

3

These instructions are for Method 1, Hooking-up in ANCHOR POINT (AP) Mode

- For a lot of Handibot work you will **only need to be directly linked** to your your Handibot from your device.
- Anchor Point mode provides a **direct connection you can use anywhere**, even when no network or Internet is available -- such as on a jobsite.
- And, Anchor Point mode is **used to put your Handibot on a network**.
- **SO, ANCHOR POINT here we come ...**

4

There is **one thing that will be helpful** in preparation for Anchor Point and will be even more useful later for Networked mode linking.

1. It is **a method** to *identify your tool's IP address* and open the its software, once you've made a link. Let's get what you need...

5

A FabMo Minder App for your device will give you a method for *identifying* your Handibot and opening the software.*

For Windows, Mac, iOS, and Android, we have **FabMo Minders** to help you find your tool.

Download and install FabMo Minder from the docs site: **docs.handibot.com** for PC's and Macs; or, from the store for Android or iOS.

*If you can't install a FabMo Minder right now, we'll give you an alternative. The Minder is the convenient method.

Handibot THE MANUAL

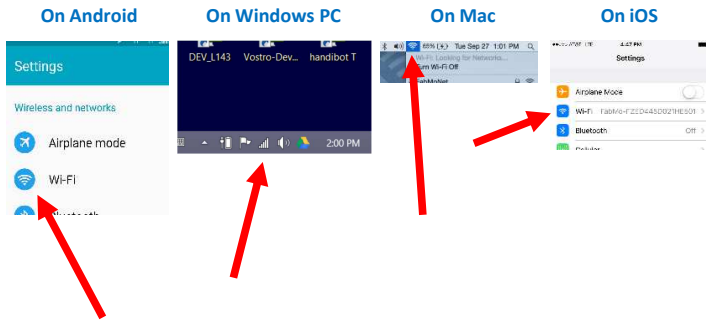

- Handibot SAFETY GUIDE 1
- UNBOXING - Taking it out of the box, Power-Up, and test case...
- Handibot User Collection
- Changing file
- 2-Zoning (Gen-2) App
- Disassembly - Router / Adding Router Bracket
- Installation - Your Handibot
- Operating the Handibot
- Installing Cable for the Minder

ToolMinders to Locate Handibots on Your Local Network

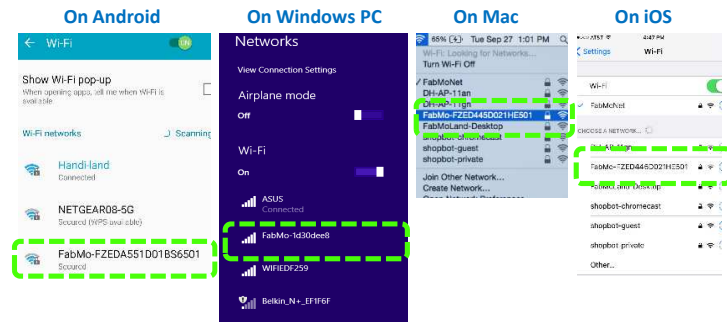

- For Windows (Click to Download: Ask (page 10))
- For Mac (Click to Download: Ask)
- For Android (Click to Download: Ask (page 10))

6 OK ... Now we're ready to Anchor your Handibot! [Your tool should still be ON]

Open the **WiFi manager** or **Network manager** on your computer or device.

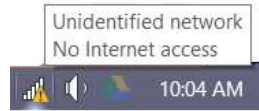

7 Your Handibot will appear in the list of available networks as: **FabMo-xxxxxxx**

Link into your Handibot's AP mode as you would to a Wi-Fi network.

Use the password: go2fabmo

8 After your device's network manager connects to your Handibot it will probably say something like: "Unidentified network, No Internet Access".

That's OK because we took your device off the internet to give **you a direct link** right into your Handibot – Anchor Point (AP) mode access.

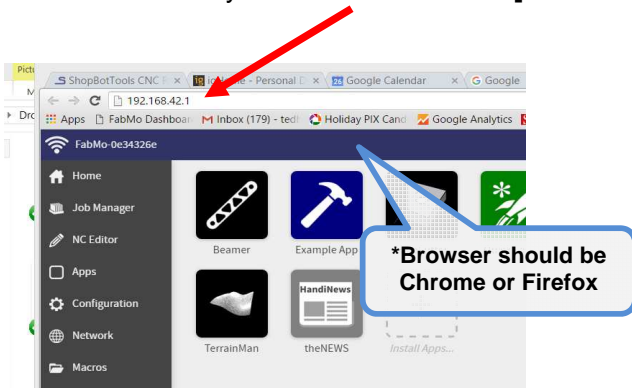

AP mode is the linkage that we will use to set-up and test your tool. Your tool **can always fall back to AP mode** (good for job sites, etc...). You also will put your tool on a network from AP Mode.

9 Start your **Tool Minder** and in a minute or so, your tool's software interface should appear.

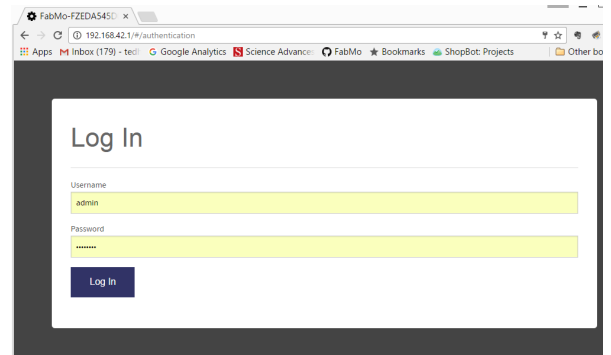

Clicking the Green Icon will take you to your tool's software

10 [**ALTERNATIVELY** you can get to your tool's software by entering "192.168.42.1" in the address bar of your internet browser*.]

11 At the beginning of any new session, you will be asked for your log-on credentials to the tool.

Initially log in with:

Username: **admin**

Password: **go2fabmo**

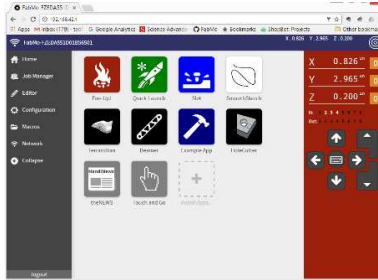

12

We call the software platform on which your Handibot runs, **FabMo**.

{It's short for digital **F**abrication and **M**otion platform.}

And we call the software interface in the browser that you are now viewing, the **Dashboard**.

FabMo Dashboard

13

At this point you could continue to the instructions for putting your tool onto a network if you have grown anxious about being off the internet for so long ...

- **However**, we'd like to first **explore the Dashboard**, do a **quick trial run** of your tool, making a test cut -- before getting distracted with the neat network capabilities of your Handibot.

* Please go to the next section of the manual for the **Quick Start and Test Cut**.
